

# TXS0104E 4-Bit Bidirectional Voltage-Level Translator for Open-Drain and Push-Pull Applications

## 1 Features

- No direction-control signal needed
- Maximum data rates:
  - 24Mbps (push pull)
  - 2Mbps (open drain)
- Available in the Texas Instruments NanoFree™ package
- 1.65 V to 3.6 V on A port and 2.3 V to 5.5 V on B port ( $V_{CCA} \leq V_{CCB}$ )
- No power-supply sequencing required –  $V_{CCA}$  or  $V_{CCB}$  can be ramped first
- Latch-up performance exceeds 100 mA per JESD 78, class II
- ESD protection exceeds JESD 22:
  - A port:
    - 2000-V Human-Body Model (A114-B)
    - 200-V Machine Model (A115-A)
    - 1000-V Charged-Device Model (C101)
  - B port:
    - 15-kV Human-Body Model (A114-B)
    - 200-V Machine Model (A115-A)
    - 1000-V Charged-Device Model (C101)
- IEC 61000-4-2 ESD (B port):
  - ±8-kV contact discharge
  - ±10-kV air-gap discharge

## 2 Applications

- [Handset](#)
- [Smartphone](#)
- [Tablet](#)
- [Desktop PC](#)

## 3 Description

This 4-bit non-inverting translator uses two separate configurable power-supply rails. The A port is designed to track  $V_{CCA}$ .  $V_{CCA}$  accepts any supply voltage from 1.65 V to 3.6 V.  $V_{CCA}$  must be less than or equal to  $V_{CCB}$ . The B port is designed to track  $V_{CCB}$ .  $V_{CCB}$  accepts any supply voltage from 2.3 V to 5.5 V. This allows for low-voltage bidirectional translation between any of the 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.

When the output-enable (OE) input is low, all outputs are placed in the high-impedance state.

The TXS0104E is designed so that the OE input circuit is supplied by  $V_{CCA}$ .

For the high-impedance state during power up or power down, tie OE to GND through a pull-down resistor; the minimum value of the resistor is determined by the current-sourcing capability of the driver.

### Package Information

PART NUMBER	PACKAGE <sup>(1)</sup>	PACKAGE SIZE <sup>(2)</sup>
TXS0104E	D (SOIC, 14)	8.65 mm × 6 mm
	PW (TSSOP, 14)	5 mm × 6.4 mm
	ZXU (BGA, 12)	2 mm × 2.5 mm
	RGY (VQFN, 14)	3.5 mm × 3.5 mm
	YZT (DSBGA, 12)	2.25 mm × 1.75 mm
	NMN (nFBGA, 12)	2 mm × 2.5 mm
	BQA (WQFN, 12)	3 mm × 2.5 mm
	RUT (UQFN, 12)	2.00 mm × 1.70 mm

- For all available packages, see the orderable addendum at the end of the data sheet.
- The package size (length × width) is a nominal value and includes pins, where applicable

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision J (August 2023) to Revision K (October 2023)</b> .....	<b>Page</b>
• Added the <i>RUT</i> package.....	1
<b>Changes from Revision I (October 2020) to Revision J (August 2023)</b> .....	<b>Page</b>
• Updated the <i>Package Information</i> table to include package lead size.....	1
• Added the <i>BQA</i> package.....	1
<b>Changes from Revision H (May 2018) to Revision I (October 2020)</b> .....	<b>Page</b>
• Updated the numbering format for tables, figures, and cross-references throughout the document .....	1
• Added NMN Package, 12-Pin nFBGA.....	4
<b>Changes from Revision G (September 2017) to Revision H (May 2018)</b> .....	<b>Page</b>
• Changed maximum values for maximum data rate within <i>Switching Characteristics: <math>V_{CCA} = 3.3\text{ V} \pm 0.3\text{ V}</math></i> table .....	15
<b>Changes from Revision F (December 2014) to Revision G (September 2017)</b> .....	<b>Page</b>
• Changed Device Information table.....	1
• Deleted GXU references throughout.....	4
• Added Junction temperature in the <i>Absolute Maximum Ratings</i> .....	8
• Reformatted <i>Electrical Characteristics</i> .....	10
• Added <i>Receiving Notification of Documentation Updates and Community Resources</i> .....	24
• Added <i>Basics of Voltage Translation</i> to Related Documentation.....	24
<b>Changes from Revision E (August 2013) to Revision F (December 2014)</b> .....	<b>Page</b>
• Added <i>Pin Configuration and Functions</i> section, <i>Handling Rating</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i>	

section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	1
• Deleted the Package thermal impedance information from the Absolute max ratings table into the Thermal Information table. Moved the T <sub>stg</sub> row into the new Handling Ratings table. ....	8
• Changed the last 2 rows of MIN MAX (24 MAX and 2 MAX) to the MIN columns, in the first switching characteristics table .....	12

---

<b>Changes from Revision D (May 2008) to Revision E (August 2013)</b>	<b>Page</b>
---	-------------

---

• Deleted the ordering table .....	1
------------------------------------	---

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
Supply voltage, $V_{CCA}$		–0.5	4.6	V
Supply voltage, $V_{CCB}$		–0.5	6.5	V
Input voltage, $V_I$ <sup>(2)</sup>	A port	–0.5	4.6	V
	B port	–0.5	6.5	
Voltage range applied to any output in the high-impedance or power-off state, $V_O$ <sup>(2)</sup>	A port	–0.5	4.6	V
	B port	–0.5	6.5	
Voltage range applied to any output in the high or low state, $V_O$ <sup>(2)</sup> <sup>(3)</sup>	A port	–0.5	$V_{CCA} + 0.5$	V
	B port	–0.5	$V_{CCB} + 0.5$	
Input clamp current, $I_{IK}$	$V_I < 0$		–50	mA
Output clamp current, $I_{OK}$	$V_O < 0$		–50	mA
Continuous output current, $I_O$		–50	50	mA
Continuous current through each $V_{CCA}$ , $V_{CCB}$ , or GND		–100	100	mA
Operating junction temperature, $T_J$			150	°C
Storage temperature, $T_{STG}$		–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The value of  $V_{CCA}$  and  $V_{CCB}$  are provided in the recommended operating conditions table.

### 6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	A Port	±2000	V
		B Port	±15	kV
	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	A Port	±1000	V
		B Port	±1000	
	Machine model (MM)	A Port	±200	V
		B Port	±200	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1) (2)</sup>

		V <sub>CCA</sub>	V <sub>CCB</sub>	MIN	MAX	UNIT
V <sub>CCA</sub>	Supply voltage <sup>(3)</sup>			1.65	3.6	V
V <sub>CCB</sub>	Supply voltage <sup>(3)</sup>			2.3	5.5	V
V <sub>IH</sub>	High-level input voltage	A-port I/Os	1.65 V to 1.95 V	2.3 V to 5.5 V	V <sub>CCI</sub> – 0.2	V
			2.3 V to 3.6 V	2.3 V to 5.5 V	V <sub>CCI</sub> – 0.4	
		B-port I/Os	1.65 V to 3.6 V	2.3 V to 5.5 V	V <sub>CCI</sub> – 0.4	
		OE input	1.65 V to 3.6 V	2.3 V to 5.5 V	V <sub>CCA</sub> × 0.65	
V <sub>IL</sub>	Low-level input voltage	A-port I/Os	1.65 V to 3.6 V	2.3 V to 5.5 V	0	V
		B-port I/Os	1.65 V to 3.6 V	2.3 V to 5.5 V	0	
		OE input	1.65 V to 3.6 V	2.3 V to 5.5 V	0	
Δt/Δv	Input transition rise or fall rate	A-port I/Os push-pull driving	1.65 V to 3.6 V	2.3 V to 5.5 V	10	ns/V
		B-port I/Os push-pull driving	1.65 V to 3.6 V	2.3 V to 5.5 V	10	
		Control input	1.65 V to 3.6 V	2.3 V to 5.5 V	10	
T <sub>A</sub>	Operating free-air temperature			–40	85	°C

- (1) V<sub>CCI</sub> is the supply voltage associated with the input port.  
(2) V<sub>CCO</sub> is the supply voltage associated with the output port.  
(3) V<sub>CCA</sub> must be less than or equal to V<sub>CCB</sub>, and V<sub>CCA</sub> must not exceed 3.6 V.

### 6.4 Thermal Information: ZXU, YZT, and NMN

THERMAL METRIC <sup>(1)</sup>		TXS0104E			UNIT
		ZXU (BGA MICROSTAR JUNIOR) <sup>(2)</sup>	YZT (DSBGA)	NMN (NFGBA)	
		12 PINS	12 PINS	12 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	132.0	89.2	134.3	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	98.4	0.9	90.7	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	68.7	14.4	88.4	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	3.1	3.0	4.3	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	68.2	14.4	89.3	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Thermal Information: D, PW, and RGY

THERMAL METRIC <sup>(1)</sup>		TXS0104E			UNIT
		D (SOIC) <sup>(1)</sup>	PW (TSSOP) <sup>(2)</sup>	RGY (VQFN) <sup>(3)</sup>	
		14 PINS	14 PINS	14 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	90.4	120.1	56.1	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	50.1	49.4	68.8	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	45.0	61.8	32.1	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	14.4	6.2	3.1	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	44.7	61.2	32.3	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	—	—	12.8	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) The package thermal impedance is calculated in accordance with JESD 51-7.
- (3) The package thermal impedance is calculated in accordance with JESD 51-5.

## 6.6 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted) <sup>(1)</sup> <sup>(2)</sup> <sup>(3)</sup>

PARAMETER	TEST CONDITIONS	V <sub>CCA</sub>	V <sub>CCB</sub>	MIN	TYP	MAX	UNIT
V <sub>OHA</sub>	Port A output high voltage I <sub>OH</sub> = −20 μA, V <sub>IB</sub> ≥ V <sub>CCB</sub> − 0.4 V T <sub>A</sub> = −40°C to 85°C	1.65 V to 3.6 V	2.3 V to 5.5 V	V <sub>CCA</sub> × 0.8			V

## 7 Parameter Measurement Information

### 7.1 Load Circuits

**Figure 7-1. Data Rate, Pulse Duration, Propagation Delay, Output Rise-Time and Fall-Time Measurement Using a Push-Pull Driver**

**Figure 7-2. Data Rate, Pulse Duration, Propagation Delay, Output Rise-Time and Fall-Time Measurement Using an Open-Drain Driver**

TEST	S1
$t_{PZL} / t_{PLZ}$ ( $t_{dis}$ )	$2 \times V_{CCO}$
$t_{PHZ} / t_{PZH}$ ( $t_{en}$ )	Open

**Figure 7-3. Load Circuit for Enable-Time and Disable-Time Measurement**

1.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
2.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
3.  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
4.  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.

## 7.2 Voltage Waveforms

The outputs are measured one at a time, with one transition per measurement. All input pulses are supplied by generators that have the following characteristics:

- $PRR \leq 10 \text{ MHz}$
- $Z_O = 50 \Omega$
- $dv/dt \geq 1 \text{ V/ns}$

**Figure 7-4. Pulse Duration**

**Figure 7-5. Propagation Delay Times**

- A. Waveform 1 is for an output with internal such that the output is high, except when OE is high (see [Figure 7-3](#)).
- B. Waveform 2 is for an output with conditions such that the output is low, except when OE is high.

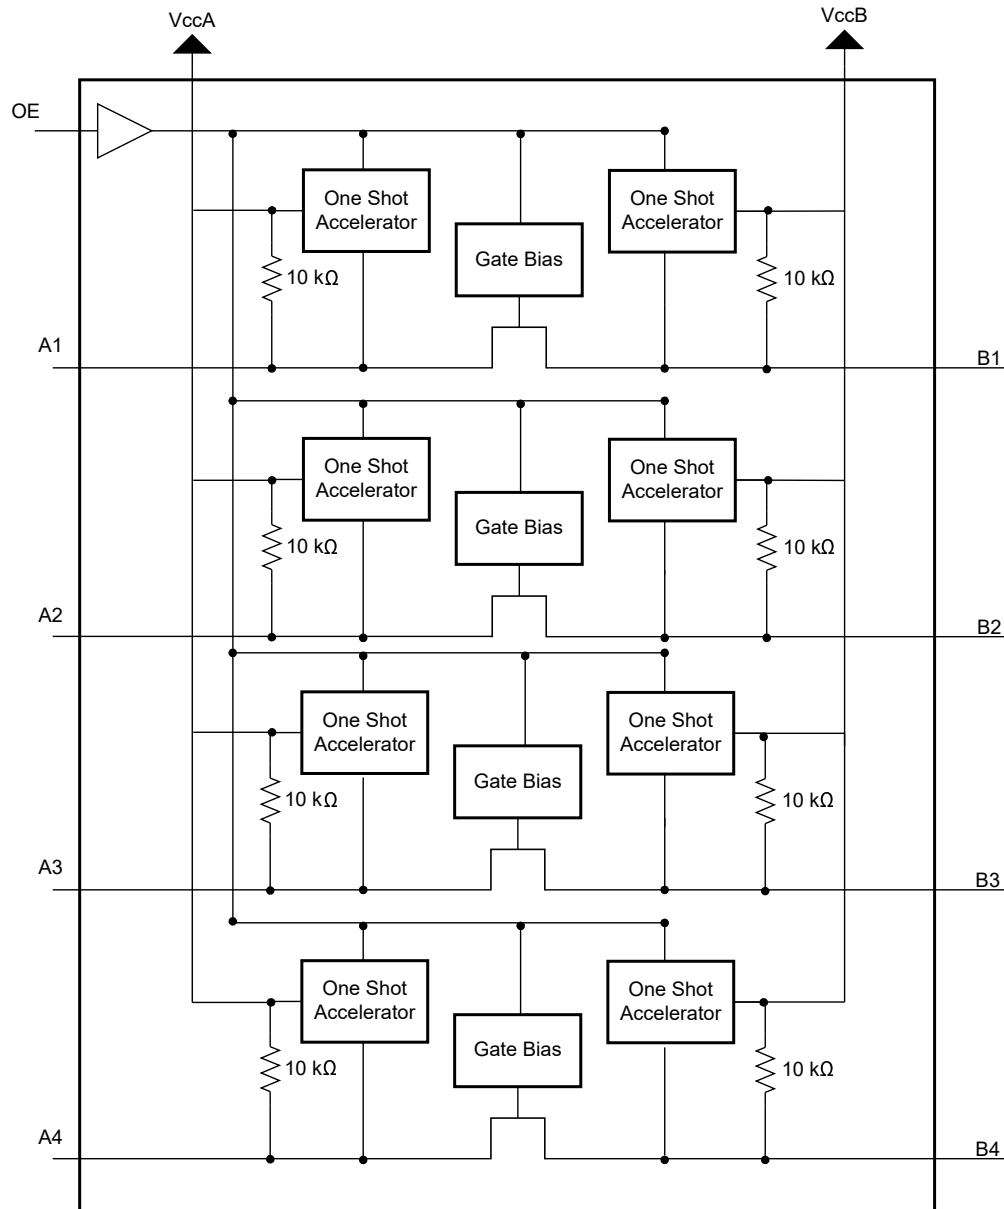

**Figure 7-6. Enable and Disable Times**

## 8 Detailed Description

### 8.1 Overview

The TXS0104E device is a directionless voltage-level translator specifically designed for translating logic voltage levels. The A port is able to accept I/O voltages ranging from 1.65 V to 3.6 V, while the B port can accept I/O voltages from 2.3 V to 5.5 V. The device is a pass gate architecture with edge rate accelerators (one shots) to improve the overall data rate. 10-k $\Omega$  pullup resistors, commonly used in open drain applications, have been conveniently integrated so that an external resistor is not needed. While this device is designed for open drain applications, the device can also translate push-pull CMOS logic outputs.

### 8.2 Functional Block Diagram

## 8.3 Feature Description

### 8.3.1 Architecture

The TXS0104E architecture (see Figure 8-1) does not require a direction-control signal in order to control the direction of data flow from A to B or from B to A.

**Figure 8-1. Architecture of a TXS01xx Cell**

Each A-port I/O has an internal 10-kΩ pullup resistor to  $V_{CCA}$ , and each B-port I/O has an internal 10-kΩ pullup resistor to  $V_{CCB}$ . The output one-shots detect rising edges on the A or B ports. During a rising edge, the one-shot turns on the PMOS transistors (T1, T2) for a short duration which speeds up the low-to-high transition.

### 8.3.2 Input Driver Requirements

The fall time ( $t_{fA}$ ,  $t_{fB}$ ) of a signal depends on the output impedance of the external device driving the data I/Os of the TXS0104E device. Similarly, the  $t_{pHL}$  and maximum data rates also depend on the output impedance of the external driver. The values for  $t_{fA}$ ,  $t_{fB}$ ,  $t_{pHL}$ , and maximum data rates in the data sheet assume that the output impedance of the external driver is less than 50 Ω.

### 8.3.3 Power Up

During operation, ensure that  $V_{CCA} \leq V_{CCB}$  at all times. During power-up sequencing,  $V_{CCA} \geq V_{CCB}$  does not damage the device, so any power supply can be ramped up first.

### 8.3.4 Enable and Disable

The TXS0104E device has an OE input that disables the device by setting OE low, which places all I/Os in the high-impedance state. The disable time ( $t_{dis}$ ) indicates the delay between the time when the OE pin goes low and when the outputs actually enter the high-impedance state. The enable time ( $t_{en}$ ) indicates the amount of time the user must allow for the one-shot circuitry to become operational after the OE pin is taken high.

### 8.3.5 Pullup and Pulldown Resistors on I/O Lines

Each A-port I/O has an internal 10-kΩ pullup resistor to  $V_{CCA}$ , and each B-port I/O has an internal 10-kΩ pullup resistor to  $V_{CCB}$ . If a smaller value of pullup resistor is required, an external resistor must be added from the I/O to  $V_{CCA}$  or  $V_{CCB}$  (in parallel with the internal 10-kΩ resistors).

## 8.4 Device Functional Modes

The TXS0104E device has two functional modes, enabled and disabled. To disable the device set the OE input low, which places all I/Os in a high impedance state. Setting the OE input high will enable the device.

## 9 Application and Implementation

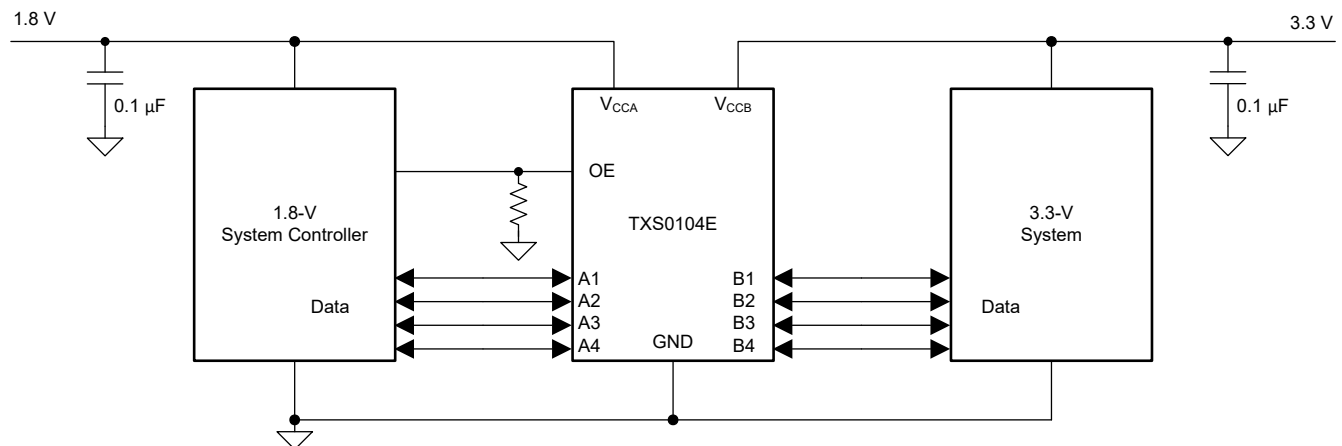

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 9.1 Application Information

The TXS0104E device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The TXS0104E device is an excellent choice for applications where an open-drain driver is connected to the data I/Os. The TXS0104E device can also be used in applications where a push-pull driver is connected to the data I/Os, but the TXB0104 device might be a better option for such push-pull applications.

### 9.2 Typical Application

**Figure 9-1. Application Schematic**

#### 9.2.1 Design Requirements

For this design example, use the parameters listed in [Table 9-1](#).

**Table 9-1. Design Parameters**

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.65 to 3.6 V
Output voltage range	2.3 to 5.5 V

### 9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
  - Use the supply voltage of the device that is driving the TXS0104E device to determine the input voltage range. For a valid logic high the value must exceed the  $V_{IH}$  of the input port. For a valid logic low the value must be less than the  $V_{IL}$  of the input port.
- Output voltage range
  - Use the supply voltage of the device that the TXS0104E device is driving to determine the output voltage range.
  - The TXS0104E device has 10-k $\Omega$  internal pullup resistors. External pullup resistors can be added to reduce the total RC of a signal trace if necessary.
- An external pull down resistor decreases the output  $V_{OH}$  and  $V_{OL}$ . Use [Equation 1](#) to calculate the  $V_{OH}$  as a result of an external pull down resistor.

$$V_{OH} = V_{CCx} \times R_{PD} / (R_{PD} + 10\text{ k}\Omega) \quad (1)$$

where

$V_{CCx}$  is the supply voltage on either  $V_{CCA}$  or  $V_{CCB}$

$R_{PD}$  is the value of the external pull down resistor

### 9.2.3 Application Curve

**Figure 9-2. Level-Translation of a 2.5-MHz Signal**

## 9.3 Power Supply Recommendations

The TXS0104E device uses two separate configurable power-supply rails,  $V_{CCA}$  and  $V_{CCB}$ .  $V_{CCB}$  accepts any supply voltage from 2.3 V to 5.5 V and  $V_{CCA}$  accepts any supply voltage from 1.65 V to 3.6 V as long as  $V_S$  is less than or equal to  $V_{CCB}$ . The A port and B port are designed to track  $V_{CCA}$  and  $V_{CCB}$  respectively allowing for low-voltage bidirectional translation between any of the 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.

The TXS0104E device does not require power sequencing between  $V_{CCA}$  and  $V_{CCB}$  during power-up so the power-supply rails can be ramped in any order. A  $V_{CCA}$  value greater than or equal to  $V_{CCB}$  ( $V_{CCA} \geq V_{CCB}$ ) does not damage the device, but during operation,  $V_{CCA}$  must be less than or equal to  $V_{CCB}$  ( $V_{CCA} \leq V_{CCB}$ ) at all times.

The output-enable (OE) input circuit is designed so that it is supplied by  $V_{CCA}$  and when the (OE) input is low, all outputs are placed in the high-impedance state. For the high-impedance state of the outputs during power up or power down, the OE input pin must be tied to GND through a pulldown resistor and must not be enabled until  $V_{CCA}$  and  $V_{CCB}$  are fully ramped and stable. The minimum value of the pulldown resistor to ground is determined by the current-sourcing capability of the driver.

## 9.4 Layout

### 9.4.1 Layout Guidelines

For device reliability, following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.
- PCB signal trace-lengths must be kept short enough so that the round-trip delay of any reflection is less than the one shot duration, approximately 30 ns, and encounters low impedance at the source driver.
- Placing pads on the signal paths for loading capacitors or pullup resistors to help adjust rise and fall times of signals depending on the system requirements

### 9.4.2 Layout Example

**Figure 9-3. TXS0104E Layout Example**

## 10 Device and Documentation Support

### 10.1 Documentation Support

#### 10.1.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, [Effects of External Pullup and Pulldown Resistors on TXS and TXB Devices application report](#)
- Texas Instruments, [Basics of Voltage Translation application report](#)
- Texas Instruments, [A Guide to Voltage Translation With TXS-Type Translators application report](#)

### 10.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 10.3 Support Resources

TI E2E™ [support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 10.4 Trademarks

NanoFree™ and TI E2E™ are trademarks of Texas Instruments.  
All trademarks are the property of their respective owners.

### 10.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 10.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**(5) MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

**(6) Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
